

**Investment Objective**

The Fairtree Global Real Estate Prescient Feeder Fund aims to provide access to high quality, international real estate assets that should benefit from capital appreciation while also delivering solid foreign dividends. The fund aims to outperform its benchmark by analyzing the central economic and political drivers in the various geographies, identifying global property sector trends and studying the specific physical property market and equity fundamentals.

**Investment Policy**

The portfolio has a long term focus, and is well diversified across geographic regions, currencies, real estate sectors and stocks. We will combine our top-down fundamental property market research with rigorous statistical valuation analysis using our proprietary models. We aim to lower portfolio volatility by adjusting the stocks and cash levels actively, while still outperforming our benchmark. We practice active risk management on a portfolio, sector and stock basis including the dynamic use of targets and stops. The fund will invest primarily in real estate equities in the United States, Japan, Hong Kong, Singapore, Australia, Europe and the UK.

MARKET COMMENTARY

In August, the underlying fund performed in line with the benchmark as both increased by around 6%. Value finally outperformed growth, with property stocks outperforming the S&P by 4%, helped by the fall in long-term treasury yields. From a geographical perspective, our largest overweight, the UK, was the weakest region, offset by our second largest overweight, Hong Kong (HK), being the strongest region. Similarly, from a US sector perspective, our largest underweight, namely residential, was one of the best-performing sectors, while our second biggest underweight was lodging, which was the weakest sector. Putting these contrasting performances together results in in-line performance for the month. Looking forward, we remain of the view that there is downside risk to the overall stock market, but because of attractive relative valuations for the property sector, combined with falling interest rates, we expect property to continue to outperform on a relative basis.

The best-performing region for the month was HK, with the developers and REITs climbing 13 to 14%. We remain overweight HK as valuations remain extremely attractive, and the fundamentals are stabilising. The second-best performers were Singapore REITs, up 9%, as domestic rate cuts become increasingly likely in the near term, and we remain overweight. The third-best performer for the month was the EU, up 8% on the back of falling inflation, increasing the likelihood of rate cuts there too. At the opposite end of the spectrum, our largest overweight, namely the UK, was the weakest performer on the back of political and social disappointments, up only 2%. Japanese developers were also up only 2% on the back of rising interest rates and the long-term demographic drag. The Singapore developers and the Aussie stocks rose by 3% for the month.

All the US sectors performed positively this month, led by self-storage, up 13%, where we remain overweight. The second best sector was residential, up 9%, where we were most underweight, but we have reduced that bet substantially as the oversupply is being absorbed and residential prices remain resilient despite challenged affordability. The third best sector for the month was malls, up 8%, where we are underweight as we prefer shopping centres within the US retail space. The weakest-performing sector was lodging, up 1%, where we have no exposure on the back of the slowing economic backdrop. Industrial stocks were also up only 1%, where we remain underweight in the face of weaker fundamentals post results combined with low yields and hence, high valuations. The third weakest performer was office, up 3%, which we were also underweight as office fundamentals remained weak. Our most overweight sector is net lease due to attractive valuations and bond-like qualities in a slowing economic environment with falling interest rates. During the month, we took profits on our large overweight in healthcare, which was the strongest sector YTD, and we are now underweight despite strong fundamentals because of stretched valuations.

The best performer for the month was HK investment property stock Swire Properties, up 17%, as their 1H24 results were solid in an uncertain environment. The second best performer was US healthcare stock Ventas, up 14%, where we decided to take profits as per above. The third best performer was Australian residential stock Stockland, up 13%, as home prices and sales increased. At the opposite end of the spectrum, the weakest performing stock was Segro, the UK industrial stock, down 3%, and we are currently reviewing this sector. The second weakest performer was US mall stock Macerich, where new management has yet to prove itself, which is also under review.

Reporting season has come to an end, and we note that asset values are decreasing at a slower rate, and increasing in some cases, which could indicate that we are entering the next physical market upcycle. Fundamentals are likely to continue to improve for most sectors and geographies as interest rates decline and economic growth remains positive.

*\*Commentary is based on USD returns gross of investment charges as at the close of US markets (16h00 EST) on the last trading day of the month. This may differ from ZAR returns, which are shown net of investment charges as at 15h00 CAT on the last trading day of the month.*

## Glossary

**Annualised Performance:** Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

**Highest & Lowest Performance:** The highest and lowest performance for any 1 year over the period since inception have been shown.

**NAV:** The net asset value represents the assets of a Fund less its liabilities.

**Current Yield:** Annual income (interest or dividends) divided by the current price of the security.

**Alpha:** Denotes the outperformance of the fund over the benchmark.

**Sharpe Ratio:** The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

**Sortino Ratio:** A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

**Standard Deviation:** The deviation of the return stream relative to its own average.

**Max Drawdown:** The maximum peak to trough loss suffered by the Fund since inception.

**Max Gain:** Largest increase in any single month.

**% Positive Month:** The percentage of months since inception where the Fund has delivered positive return.

**Total Expense Ratio (TER%):** The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.

**Performance fee incl. in TER (%):** The Performance Fee is a payment made to the Fund Manager for generating outperformance and is generally calculated as percentage of outperformance, often both realized and unrealized.

**Transaction Costs (TC%):** The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.

**Total Investment Charges TIC (%):** The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

## Specific Risk

**Default Risk:** The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

**Derivatives Risk:** The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

**Developing Market (excluding SA) Risk:** Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

**Foreign Investment Risk:** Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

**Interest Rate Risk:** The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

**% Property Risk:** Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

**Currency Exchange Risk:** Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

**Geographic / Sector Risk:** For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

**Derivative Counterparty Risk:** A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

**Liquidity Risk:** If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

**Equity Investment Risk:** Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

## Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

## Risk Indicator Definition

This portfolio is permitted to invest in foreign securities which, within portfolios, may have additional material risks, depending on the specific risks affecting that country, such as: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of market information. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. Investors are reminded that an investment in a currency other than their own may expose them to a foreign exchange risk.

## Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

A Feeder Fund is a portfolio that invests in a single portfolio of a collective investment scheme which levies its own charges, and which could result in a higher fee structure for the feeder fund.

The Manager retains full legal responsibility for any third party named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
