

Investment Objective

The Fairtree Balanced Prescient Fund aims to generate long-term wealth for investors by producing inflation beating returns. The Fund is managed to outperform the South African - Multi Asset - High Equity peer group benchmark. The Fund's objective is to create medium to long-term capital growth, within the constraints governing retirement funds - Regulation 28. The Fund invests in a diversified and balanced range of asset classes and may invest in offshore securities when the benefit of higher returns and portfolio diversification are available.

Investment Policy

The fund invests in a diverse combination of equities, property, bonds and money market instruments. The portfolio has a long-term focus and invests predominately in domestic securities. The fund may invest a maximum net foreign exposure of 45% (excl. South Africa). The fund is actively managed, both at security and asset class level to create capital growth while preserving capital on a real (above inflation) and absolute basis.

RISK INDICATOR

ANNUALISED PERFORMANCE (%)

CUMULATIVE PERFORMANCE

ANNUALISED PERFORMANCE (%)

	Fund	Benchmark
1 year	13.97	13.33
3 years	10.16	9.33
5 years	14.01	9.92
Since incep.	11.04	7.91

Since inception till 3 August 2021, the 1.00% fee class was used as this was the most expensive fee class at the time of launch.

MARKET COMMENTARY

Following a sharp sell-off early in the month, global equity markets rebounded through the remainder of August, posting solid gains across the board. US equities outperformed most core markets, even as large consumer stocks lagged. In South Africa, listed equities continued to surpass their emerging market peers, with strong performances from banks, retailers, and property sectors, while resources underperformed. Global and local bond yields declined over the month, reflecting signs of slowing growth.

The initial market decline was sparked by concerns that the US economy was nearing recession, with weaker-than-expected non-farm payrolls and a higher unemployment rate stoking fear. However, these concerns eased as resilient consumer data pointed to underlying strength in household spending. Manufacturing, on the other hand, remained weak, suggesting that the sector's recent recovery may have been short-lived. With inflation continuing to decelerate and the Federal Reserve growing more cautious about labour market conditions, a rate-cutting cycle is anticipated at the Fed's September meeting.

Europe and China, whose economies are closely tied to manufacturing, experienced further weakness. In Europe, inflation continued to fall, while softer retail sales and investor sentiment have paved the way for a potential rate cut by the European Central Bank. In China, the property sector remains sluggish, and export data, which had been robust, recently disappointed. This adds pressure on authorities to stimulate domestic consumption, with a major mortgage refinancing programme under consideration.

The global slowdown, particularly in China, has weighed on industrial commodity prices. However, gold has performed well, supported by expectations of lower real yields, rising geopolitical risks, and strong central bank demand.

South African assets have benefited from post-election optimism and improved sentiment. Despite the recent rally, valuations remain attractive. As policy certainty increases, along with reforms in the energy and transport sectors, we expect local stocks to gradually move higher. With inflation and interest rates expected to ease, households should start to see relief by year-end. The South African Reserve Bank is also likely to begin cutting rates in September.

Equities: US financial conditions remain tight, with increasing signs that growth may be slowing. Corporates are finding it harder to pass on higher prices to consumers, adding pressure to profit margins. Valuations and earnings expectations remain elevated. Outside the US, valuations seem fairer, with emerging markets trading at attractive valuations. We prefer South Africa and emerging market equities with better valuations, less exposure to inflation risks and more exposure to a China recovery and the potential for policy easing. We favour exposure to global defensive sectors and securities. We like resources and non-resource rand hedge exposures. We see value in local stocks with potential positive catalysts playing out.

Fixed income: Local bond yields are attractive. Local core inflation remains contained, and we expect the SARB to cut rates from September. The sovereign credit premium has compressed but remains high. Global developed market bonds remain attractive, given the outlook for softer growth.

Currency: We expect the US dollar upside to be limited and should see a weakening bias over coming quarters given its over-valuation status, weak twin deficit fundamentals and expected rate cuts by the Fed.

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

Alpha: Denotes the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Sortino Ratio: A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

High Water Mark: The highest level of performance achieved over a specified period.

Performance Fee Cap: The maximum performance fee that can be charged over a specified period

Total Expense Ratio (TER%): The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product.

Performance fee incl. in TER (%): The Performance Fee is a payment made to the Fund Manager for generating outperformance and is generally calculated as percentage of outperformance, often both realized and unrealized.

Transaction Costs (TC%): The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product.

Total Investment Charges TIC (%) = TER (%) + TC (%): The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

Specific Risk

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

Risk Indicator Definition

These portfolios generally hold more equity exposure than low risk portfolios but less than high risk portfolios. In turn the expected volatility is higher than the low risk portfolios but less than high risk portfolios. The probability of losses are higher than that of the low risk portfolios, but less than high risk portfolios. Expected potential long term investment returns could therefore be lower than high risk portfolios due to lower equity exposure, but higher than low risk portfolios.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macro-economic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

This portfolio operates as a white label fund under the Prescient Unit Trust Scheme, which is governed by the Collective Investment Schemes Control Act.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
